

**AMENDMENTS TO THE SPECIFICATION**

Please insert the following heading and paragraph after page 4, line 2 of the as-filed specification (immediately prior to “BRIEF DESCRIPTION OF THE DRAWINGS”):

**BRIEF SUMMARY OF THE INVENTION**

According to some embodiments, the following may be initially displayed to a user in a web browser search bar: (i) an initial set of toolbar buttons and (ii) a search feature user input portion to enter a search term to be transmitted to a remote search engine via a communication network. Note that the initial set of tool bar buttons may be displayed to the user without displaying a subsequent set of toolbar buttons. A single indication may then be received from the user via one of the initial set of toolbar buttons. As a result of the single indication, the initial set of toolbar buttons may be replaced with the subsequent set of toolbar buttons such that (i) the initial and subsequent sets of toolbar buttons are not simultaneously displayed and (ii) the search feature user input portion remains displayed to the user.
